

Vibration-resistant Weighing Indicators

AD-4408A / AD-4408C

Equipped with a newly developed High Performance Digital Filter (HPDF) to provide excellent performance in places where there is a lot of vibration!

The AD-4408A and AD-4408C weighing indicators are both equipped with the new HPDF that makes full use of A&D's digital conversion technology.

In situations where vibration control is needed, they provide high accuracy as well as high-speed response. With the AD-4408A/AD-4408C, you can inexpensively improve the performance of weighing instruments such as automatic checkweighers and CFWs, which inevitably involve a source of structural vibration. They also enhance both maintenance and cost efficiency thanks to the greatly reduced need for structures to dampen mechanical vibration.

To see the video showing a demonstration of the High Performance Digital Filter function, visit <http://www.aandd.jp/products/weighing/indicator/ad4408a.html>
